Identification

op
W. Southworth

(Note that the following is an Abstract, which should be
replaced by a full description at a later time.)

Function of Entry:

   A command to create a new process - may be called
   only by the initializer process.

Calling Sequence for Entry:

   call op(desc, subsys)

Declaration of Arguments:

   dcl desc char(*) var,

        subsys char(*) var;

Description of Arguments:

   desc - is the I/O channel descriptor name that the
          new process will use.

   subsys - is the name of the first program that the
            new process will call.
